CLAIMS

What is claimed is:

1.   A method performed by at least one information handling system, the method comprising:

on a display device, within at least one web browser window, displaying a result of a search by a website in response to a search term query specified by a user, and displaying a list of folders;

on the display device, within the web browser window, highlighting at least a portion of the displayed result of the search by the website; and

in response to a command from the user via the web browser window, saving the highlighted portion in a folder that is selected by the user from among the displayed list of folders.

2.   The method of claim 1, wherein the displayed result of the search is:
a result of a search of the website.

3.   The method of claim 1, wherein the displayed result of the search is:
a result of a search of the website, wherein the information handling system outputs a web services call to the website, and wherein the website performs the search in response to the web services call and outputs the result of the search to the information handling system.

4.   The method of claim 1, wherein the website is a first website, and wherein the displayed result of the search is:
a result of a search of at least a second website.

5. The method of claim 1, wherein the website is a first website, and wherein the displayed result of the search is:

a result of a search of at least a second website, wherein the first website performs the search by outputting a web services call to the second website, and wherein the second website performs the search in response to the web services call and outputs the result of the search to the first website.

6. The method of claim 1, wherein the displaying comprises:

on the display device, displaying the result of the search after translation from an original result of the search, wherein the original result has an XML format.

7. The method of claim 1, wherein the displaying comprises:

on the display device, displaying the result of the search after translation from an original result of the search, wherein the original result has a generic XML format.

8. The method of claim 1, wherein the displaying comprises:

on the display device, displaying the result of the search after translation from an original result of the search, wherein the original result has a non-XML format.

9. The method of claim 1, wherein the displayed result of the search is rendered directly from an XML format.

10. The method of claim 1, wherein the displayed result of the search has a non-XML format.

11. The method of claim 10, wherein the displayed result of the search has an HTML format.

12.   The method of claim 10, wherein the saving comprises:

translating the displayed result of the search from the non-XML format into an XML format, and saving the XML-formatted information in the folder that is selected by the user from among the displayed list of folders.

13.   The method of claim 1, and comprising:

in the selected folder, marking the saved portion to identify whether it has been viewed by the user.

14.   The method of claim 1, wherein the user is a first user, and comprising:

in response to a command from the first user, selectively enabling access to the selected folder by one or more second users specified by the first user.

15.   A system, comprising:

at least one information handling system for:

> on a display device, within at least one web browser window, displaying a result
>> of a search by a website in response to a search term query specified by a
>> user, and displaying a list of folders;
> on the display device, within the web browser window, highlighting at least a
>> portion of the displayed result of the search by the website; and
> in response to a command from the user via the web browser window, saving the
>> highlighted portion in a folder that is selected by the user from among the
>> displayed list of folders.

16.   The system of claim 15, wherein the displayed result of the search is:

a result of a search of the website.

17. The system of claim 15, wherein the displayed result of the search is:

a result of a search of the website, wherein the information handling system is for outputting a web services call to the website, and wherein the website is for performing the search in response to the web services call and outputting the result of the search to the information handling system.

18. The system of claim 15, wherein the website is a first website, and wherein the displayed result of the search is:

a result of a search of at least a second website.

19. The system of claim 15, wherein the website is a first website, and wherein the displayed result of the search is:

a result of a search of at least a second website, wherein the first website is for performing the search by outputting a web services call to the second website, and wherein the second website is for performing the search in response to the web services call and outputting the result of the search to the first website.

20. The system of claim 15, wherein the information handling system is for:

on the display device, displaying the result of the search after translation from an original result of the search, wherein the original result has an XML format.

21. The system of claim 15, wherein the information handling system is for:

on the display device, displaying the result of the search after translation from an original result of the search, wherein the original result has a generic XML format.

22. The system of claim 15, wherein the information handling system is for:

on the display device, displaying the result of the search after translation from an original result of the search, wherein the original result has a non-XML format.

23.   The system of claim 15, wherein the displayed result of the search is rendered directly from an XML format.

24.   The system of claim 15, wherein the displayed result of the search has a non-XML format.

25.   The system of claim 24, wherein the displayed result of the search has an HTML format.

26.   The system of claim 24, wherein the information handling system is for:

translating the displayed result of the search from the non-XML format into an XML format, and saving the XML-formatted information in the folder that is selected by the user from among the displayed list of folders.

27.   The system of claim 15, wherein the information handling system is for:

in the selected folder, marking the saved portion to identify whether it has been viewed by the user.

28.   The system of claim 15, wherein the user is a first user, and wherein the information handling system is for:

in response to a command from the first user, selectively enabling access to the selected folder by one or more second users specified by the first user.

29.   A computer program product, comprising:

at least one computer program processable by at least one information handling system for causing the information handling system to:

on a display device, within at least one web browser window, display a result of a search by a website in response to a search term query specified by a user, and display a list of folders;

on the display device, within the web browser window, highlight at least a portion of the displayed result of the search by the website; and

in response to a command from the user via the web browser window, save the highlighted portion in a folder that is selected by the user from among the displayed list of folders; and

apparatus from which the computer program is accessible by the information handling system.

30.   The computer program product of claim 29, wherein the displayed result of the search is:

a result of a search of the website.

31.   The computer program product of claim 29, wherein the displayed result of the search is:

a result of a search of the website, wherein the information handling system is for outputting a web services call to the website, and wherein the website is for performing the search in response to the web services call and outputting the result of the search to the information handling system.

32.   The computer program product of claim 29, wherein the website is a first website, and wherein the displayed result of the search is:

a result of a search of at least a second website.

33.   The computer program product of claim 29, wherein the website is a first website, and wherein the displayed result of the search is:

a result of a search of at least a second website, wherein the first website is for performing the search by outputting a web services call to the second website, and wherein the second website is for performing the search in response to the web services call and outputting the result of the search to the first website.

34.   The computer program product of claim 29, wherein the computer program is processable by the information handling system for causing the information handling system to:

on the display device, display the result of the search after translation from an original result of the search, wherein the original result has an XML format.

35.   The computer program product of claim 29, wherein the computer program is processable by the information handling system for causing the information handling system to:

on the display device, display the result of the search after translation from an original result of the search, wherein the original result has a generic XML format.

36.   The computer program product of claim 29, wherein the computer program is processable by the information handling system for causing the information handling system to:

on the display device, display the result of the search after translation from an original result of the search, wherein the original result has a non-XML format.

37.   The computer program product of claim 29, wherein the displayed result of the search is rendered directly from an XML format.

38.   The computer program product of claim 29, wherein the displayed result of the search has a non-XML format.

39.   The computer program product of claim 38, wherein the displayed result of the search has an HTML format.

40.   The computer program product of claim 38, wherein the computer program is processable by the information handling system for causing the information handling system to:

translate the displayed result of the search from the non-XML format into an XML format, and save the XML-formatted information in the folder that is selected by the user from among the displayed list of folders.

41.   The computer program product of claim 29, and wherein the computer program is processable by the information handling system for causing the information handling system to:

in the selected folder, mark the saved portion to identify whether it has been viewed by the user.

42.   The computer program product of claim 29, wherein the user is a first user, and wherein the computer program is processable by the information handling system for causing the information handling system to:

in response to a command from the first user, selectively enable access to the selected folder by one or more second users specified by the first user.
